Note #1: Joists from the N series designs may be substituted for the listed beam. When joists are substituted, the restrained rating of the joist must be equal to or greater that the restrained rating of the assembly. Additional joist substitution requirements are contained in the front of the Fire Resistance Directory.

# This thickness applies when optional Item 10 is used over 3-1/4 in. light weight concrete topping.
The thicknesses of Spray-Applied Fire Resistive Materials shown in the table below are applicable when normal weight concrete is used and the thickness applied to the beams’ lower flange edges is reduced to one-half that shown in the table.
