DUCTILCRETE® CS100 System

System Description

DUCTILCRETE® CS100 is a patented dual-layer engineered system for concrete slabs. The DUCTILCRETE® CS100 system results in high performance, flat concrete slabs with column line joint spacing while providing increased load capacity and reduced maintenance when compared to traditional slab construction systems.

Application Types

DUCTILCRETE® CS100 is recommended for the construction of new interior concrete slabs. Typical end use applications:

- Warehouses
- E-commerce and distribution centers
- Manufacturing facilities

System Advantages

Concrete slabs designed and installed with DUCTILCRETE® CS100 will typically have the following advantages vs. conventional concrete slabs:

- Up to 75% contraction joint reduction
- Reduced curling
- Reduced long-term maintenance
- 5-year warranty provided by licensed contractor
- Sustainable – on average approximately 15% less concrete is used
- Increased load carrying capacity
- Elimination of wire mesh/rebar/steel fibers in the body of the slab

System Information

DUCTILCRETE® CS100 is an engineered system comprising of project specific slab designs, blends of proprietary liquid admixtures and synthetic fibers, and placement practices.

The DUCTILCRETE® liquid admixtures and DUCTILCRETE® fibers are delivered to the jobsite ready-to-use in accordance with manufacturer’s recommendation and design.
Specifications and Information Guidance

Refer to the latest DUCTILCRETE® “Standard Interior Floor Slab Specification” for design and installation guidance, which can be obtained from your local GCP representative.

The DUCTILCRETE® technology is covered by US Patent Nos. 7,968,178 and 9,828,768.
