ROOF DETAIL TAPE (US Version)
4” seaming tape for roof decking

Product Description

ROOF DETAIL TAPE is a premier 4” tape based on the GRACE ICE & WATER SHIELD® roofing underlayment technology. The tape complies with ASTM D1970 and the Connecticut State Building Code. It is composed of two waterproofing materials—an aggressive rubberized asphalt adhesive backed by a high performance waterproofing film. The rubberized asphalt surface is backed with a release paper that protects its adhesive quality. During application, the release paper is easily removed, allowing the rubberized asphalt to bond tightly to the roof deck, the tape itself and GRACE ICE & WATER SHIELD® roofing underlayments.

Product Advantages

- Easy to handle and apply
- Bonds firmly to the roof deck and seals to itself
- Seals around fasteners
- Membrane will not crack, dry out or rot
- Protects under all standard sloped roof coverings
- Slip resistant surface
- Reroofable
- Proven track record

Features & Benefits

- Easy to handle and apply—The self-adhesive tape bonds firmly to the substrate and seals to itself without heat or special adhesives.
- Seals around fasteners—The rubberized asphalt layer in ROOF DETAIL TAPE seals around roofing fasteners, resisting leakage caused by water back-up behind ice dams, or from wind-driven rain.
- Tape will not crack, dry out or rot—ROOF DETAIL TAPE resists attacks from fungus and bacteria; maintains its integrity for long lasting protection.
- Protects under all standard sloped roof coverings—ROOF DETAIL TAPE protects under slate, tile, cedar shakes or metal, as well as under conventional asphalt shingles.
- Slip resistant surface—ROOF DETAIL TAPE has a slip resistant embossed surface to maximize traction and safety for applicators.
Guidelines for Use

ROOF DETAIL TAPE is used to seam the joints in roof decking and also as a flashing to provide resistance against water infiltration at trouble-prone roof detail areas. Local building codes should be consulted for specific requirements.

Installation Procedure

Surface Preparation

Install ROOF DETAIL TAPE directly on a clean, dry, continuous structural substrate. Some suitable substrates are plywood, wood composition, metal, concrete or gypsum sheathing. For all other substrates, contact your GCP representative. Remove dust, dirt, loose nails and old roofing materials. Protrusions from the substrate area must be removed. Substrates shall have no damaged or unsupported areas, or voids. Repair substrate before installing the membrane.

Priming

Prime concrete, masonry, DensGlass Gold® and DensDeck® surfaces with PERM-A-BARRIER® WB primer. Prime wood composition and gypsum sheathing with PERM-A-BARRIER® WB primer if adhesion is found to be marginal (refer to Technical Letter 12, Use on Oriented Strand Board (OSB) Roof Sheathing). Apply PERM-A-BARRIER® WB primer at a rate of 250–350 ft²/gal (6–8 m²/L). Priming is not required for other suitable surfaces provided that they are clean and dry.

Safety and Handling

Read and understand the product label and Safety Data Sheet (SDS) for each system component. All users should acquaint themselves with this information prior to working with the products and follow the precautionary statements. SDSs can be obtained from our web site at gcpat.com or by contacting GCP toll free at 1-866-333-3SBM (3726).

Precaution & Limitations

- Slippery when wet or covered by frost.
- Consistent with good roofing practice, always wear fall protection when working on a roof deck.
- Release liners are slippery. Remove from work area immediately after membrane application.
- Do not leave permanently exposed to sunlight. Cover within 30 days.
- Do not fold over the roof edge unless the edge is protected by a drip edge, gutter or other flashing material.
- Do not install on chamfered edges of wood plank.
- If the tape shows any holes, fishmouths, tears or damage, cut out damaged area and discard. Seals around nails or fasteners.
Fully adheres to decks, resisting leaks from wind-driven rain or water backup due to ice dams. If fasteners are removed leaving holes in the tape, they must be patched. The membrane may not self-seal open fastener penetrations.

Do not install fasteners through the membrane over unsupported membrane areas of the structural deck, such as over the joints between adjacent structural panels.

Due to its slight asphaltic odor, do not apply where membrane is exposed to interior living spaces. Refer to product literature for more complete information.

Not compatible with EPDM or TPO.

Not compatible with polysulfides, uncured neoprene, wood substrates with high concentrations of resin (pitch), or flexible PVC. ROOF DETAIL TAPE is generally compatible with window and skylight flanges; for more information, refer to Technical Letter 5.

Do not use in the desert southwest U.S.

Do not use under copper, COR–TEN® or zinc metal roofs in high altitudes.

**Code Compliance**

ROOF DETAIL TAPE meets the following standards:

- Underwriters Laboratories Inc. Class A fire classification under fiber–glass shingles and Class C under organic felt shingles (per ASTM E108/UL 790)
- International Conference of Building Officials (ICBO–ES) Report No. 3997
- Southern Building Code Congress International (SBCCI PST & ESI) Report No. 94133C
- Miami-Dade County NOA 09–0107.08.
- City of Los Angeles RR 25330
